How might it change your clinical practice? Conclusions ========== Noise in the external environment is ubiquitous, largely unavoidable, and may have detrimental effects on learning and memory. Despite the ubiquity of noise, it is usually filtered out by the brain. However, just as noise is ubiquitous, so is the ability of the brain to compensate and filter out noise. Noise present in the external environment can lead to time and space distortions that make useful information difficult to access and use. However, we should also be mindful of noise that occurs in our thinking and discourse. We argue that noise should be used as a means of measuring the level of cognitive load, and should be carefully considered when selecting instructional materials. We also argue that in higher cognitive functions such as learning and memory, noise can be a useful tool to help us gain further insights into the mechanisms of cognition. We discuss two theoretical models that suggest that noise may be used to help understand how cognitive processes are carried out. With this understanding, we can model the way in which these mechanisms interact to construct, retrieve, and use new information efficiently. We offer up practical suggestions on how noise can be used to maximize learning, learning experience, and memory consolidation. Photo credit: artist As the Icelandic High Court prepares to rule on the fate of the Masterpiece Cakeshop, the battle over cakes — with a religious spin — remains far from over. The country’s attorney general argues that the state has the power to dictate what products within its borders are available for sale. The baker, on the other hand, argues the state’s position is unconstitutional. It's not clear how the case will end, but it provides a fascinating window into the big questions that arise as the U.S. grapples with its own religious freedom controversies. Let's back up to the beginning. A story from Iceland The saga began in December 2013, when bakery owner Gunnar Kristinsson refused to make a wedding cake for a gay couple. The customer, identified in court documents only as “L,” wasn’t satisfied with the standard response of “no.” So he or she took Kristinsson to court. In the span of 13 months, the case traveled through several courts, saw a brief stint in the U.S. Supreme Court and led to a 2017 split decision in Iceland's Supreme Court.
